

IGT Care and Maintenance

Thank you for your purchase of your IGT system.

Your new In-Ground trampoline will provide many years of fun and fitness but your system does need regular cleaning and occasional maintenance.

Please read the following recommendations for cleaning and maintenance.

Failure to provide the care your system needs could affect the warranty.

Cleaning and Protecting

Regular cleaning and conditioning of the trampoline pad and mat will extend the looks and life of your IGT system. We recommend more frequent cleaning and conditioning if the IGT system is in contact with sprinkler systems.

Use a mild soap and warm water to clean the pad and jump mat. Dish soap works well. We recommend using a soft brush to scrub off as much dirt as possible. Rinse with water and dry with a towel.

We recommend using 303 Aerospace Protectant, a conditioner and UV protectant, on the pad and jump mat. Simply spray on and wipe off with a clean dry towel.

Inspection and Maintenance

A routine inspection of the trampoline components is essential to ensure your IGT system is safe to use. We recommend inspecting the condition of the springs, jump mat and pad. You should check for loose or missing springs, which can indicate worn out springs, or failing jump mat. Eventually the jump mats will wear out from use or UV and moisture exposure. It is important to check the jump mat "D" rings for corrosion and the "D" ring straps for fraying or tearing. Springs should be checked for corrosion and good tension. Pad should be checked to make sure the straps that hold the pad in place are tight so the pad doesn't shift exposing the springs or frame. The pad will need to be replaced if the vinyl cover or the foam has deteriorated. Any component that is worn or broken should be replaced before continuing use of the trampoline.
